TITLE : ELECTRONIC CAMERA

ABSTRACT : PURPOSE: To facilitate camera setting at 2nd image pickup by recording image data and header information including a setting condition of a camera in the case of image pickup to a recording means.

CONSTITUTION: An IC card 15 has a standard information recording header section and a write information header section recording desired camera setting condition or the like and records the information with division for each of plural sets of image information. After the image pickup recording, a sub- microcomputer 21 is used to set the reproduction mode and a selector switch 24 is operated, a desire image is selected from the IC card 15, a setting key 25 is operated to store header information of an image to a microcomputer 16 and the camera mode is selected and the header information relating to a camera setting command is fed to a lens microcomputer 12 and a card interface 14 to allow them to execute camera setting of each section. Thus, the camera setting condition of the picked-up image is recorded corresponding to the image to attain desired camera setting easily.
